

The right curtains, the right size.

A beautiful curtain becomes the perfect curtain when it fits your window perfectly. But how do you know if your favorite, ready-to-hang designer curtain from our collection is sized to fit your window? Let us show you how to get accurate measurements, every time.

Before beginning, consider these suggestions:

- 1) Use a metal tape measure, not a basic ruler or flexible tailor's tape measure.
- 2) Measure all windows even if they appear to be the same size.

Referencing the diagram below, let's measure your window:

- 1) Measure the width of the window frame (A to B).
- 2) Measure the width of window frame molding (C).
- 3) Measure the length of the window frame (D to E).
- 4) Measure the length from the top of the window frame to the floor (F to G).
- 5) Measure the distance from the ceiling to the top of the window frame (H).

Measuring your window to use existing hardware:

The starting point for measuring the length varies with the type of rod.

- 1) For wall or frame mounted traverse rods, start measuring 1/2" above the top of the rod.
- 2) For ceiling mounted traverse rods, start measuring 1/4" below the top of the rod.
- 3) For decorative traverse rods, start measuring from the bottom of the curtain ring.
